christopher bek has produced a revolutionary physics theory and claims that this theory of one 2001 solves the greatest scientific problem of all time by uniting relativity theory 1905 with quantum theory 1925 according to bek it proves that the universe is bounded at light speed and planck's constant that there is only one photon i.e. a being of light that one photon is god and that reality is an illusion meaning the moon does not exist when no one is looking at it he says that physicists are ignoring the theory because it effectively pulls their pants down the theory is dead simple and can be explained in just a few minutes the theory of one brings the reader face to face with the stunning realization that the universe is bounded rather than unbounded as einstein and others have asserted the theory of one delivers the ocean it is the theory that spells the end of physics it is the monolith of 2001 a spacetime odyssey

karl n llewellyn was one of the founders and major figures of legal realism and his many keen insights have a central place in american law and legal understanding key to llewellyn s thinking was his conception of rules put forward in his numerous writings and most famously in his often mischaracterized declaration that they are pretty playthings previously unpublished the theory of rules is the most cogent presentation of his profound and insightful thinking about the life of rules this book frames the development of llewellyn s thinking and describes the difference between what rules literally prescribe and what is actually done with the gap explained by a complex array of practices conventions professional skills and idiosyncrasies most of which are devoted to achieving a law s larger purpose rather than merely following the letter of a particular rule edited annotated and with an extensive analytic introduction by leading contemporary legal scholar frederick schauer this rediscovered work contains material not found elsewhere in llewellyn s writings and will prove a valuable contribution to the existing literature on legal realism

for many years scientists have attempted to unite the four fundamental forces the strong and weak nuclear forces gravity and electromagnetism many have tried uniting known theories such as general relativity with quantum mechanics string theory and even the standard model these theories differ and it seems difficult to find a link to connect them in the theory of everything solved author and researcher lawrence j wippler explains a new theory and provides an alternate understanding of the workings of the atom he found that the four fundamental forces of nature can be united by just three particles the north and south magnetic monopoles and a particle of matter that represents an element he describes how these particles interact with each other and how they are able to create all forms of energy including magnetism and gravity setting aside the presently known theories and laws of physics and attacking the problem from a different perspective

wippler kept his assumptions simple when developing the three particle theory in the theory of everything solved wippler shows that the north and south monopoles and a particle of matter are the building blocks of the universe
